LASERWAR equipment is the key to your business success

LASERWAR is trusted by laser tag club owners in 76 countries. We have executed more than 25000 orders during the period of 10 years of work on the market. Opening a laser tag club is a huge step. The success of a new business largely depends on the choice of the equipment supplier. When buying expensive equipment, you should be sure that it will not let you down during the first months of work and will provide the club with a constant flow of customers and you - with growing profits.

LASERWAR is trusted by laser tag club owners in 76 countries. We have executed more than 25000 orders during the period of 10 years of work on the market.

Why do laser tag professionals choose Laserwar?

Advanced technology

LASERWAR is the only company on the market with offline, online and real time statistics on different specialized platforms. Each technology comes with unique software. In this way, you get a complete technological solution supporting any kind of laser tag business.

Unique "smart" devices

We offer 36 additional laser tag devices. They will help to implement any scenarios and make the games exciting and realistic. For the sake of new vivid impressions, players will return to your club over and over again.

Best equipment range on the market

At your service - 75 models of weapons, including its the unique devices of the company: AK-12LT Predator and MP9-LT Phoenix. You will be able to choose equipment for players of all ages, genders and levels of training.

Full cycle production

All the equipment - from the manufacturing of printed boards to testing of finished products is made on the company premises by professional employees and passes strict quality control before the final shipment to the client.

Precise optics

Prism and Parallax are the first Russian optical laser tag systems certified in accordance with Russian GOSTs. Their safety is proven and confirmed by regulatory documents. Range tests proved the effectiveness of our optics: the range for snipers is up to 600 meters in cloudy weather. The newest Parallax system has a 25-50% increase in range and a three-fold increase in accuracy compared to Prism. The quality of our optical systems is a great opportunity for your laser tag club.

Security

All components of the game sets are thoroughly tested before they are available for sale: safety tests, tests in various weather and climate conditions. The result of the research was a successful completion of the GOST R, CE certification. You can be sure that the equipment is completely harmless, meets high international standards and will withstand intensive operation.

Universality

Our equipment is compatible with international gaming protocols, including Miles Tag 2. No matter where in the world you come across our taggers, you can use the devices everywhere. This means that regional championships can be brought to the international and even world level.

Why buy Laserwar equipment?

Test drive

LASERWAR gives customers the opportunity to test-drive their equipment. After 14 days of testing our products, you will get a complete overview of the construction, functionality and design of our products. It will save you money.

Upgrade option

The LASERWAR equipment is developed according to the principle of backward compatibility. You won't have to spend a lot of money to upgrade your arsenal. Our customers can upgrade their game sets for little money as part of the upgrade program.

Warranty

We are confident in the performance of the equipment and give a warranty on the product from 12 to 24 months. And at the end of the warranty period, we will always help you with advice on the business management. LASERWAR never leaves its customers alone with the equipment.

Support

We have created an extensive network of service centers. You don't have to spend money sending equipment to us. Repairs and maintenance can be carried out at the nearest service center to your club.

Free software

LASERWAR develops unique software for its equipment. It is installed on a PC or tablet and allows you to set up the necessary parameters of the weapon in a couple of clicks and quickly read the game stats. The LASERWAR 10th generation online configurator allows you to do all that online. It is updated automatically, so you don't have to worry about software updates. We provide the software to our customers absolutely free of charge.

Promotions and discounts

Our principle: a big order - a big discount. For several years we have been offering discounts: "10+2", "15+3", "20+4". A set of promotional materials that can be used in the production of any printed souvenirs is a bonus for any customer. You can pay for the purchase in instalments.

Ready-made sets

LASERWAR offers sets of equipment for owners with a budget of any level for both indoor and outdoor laser tag. Ready-to-use solutions can save you time and money.

LASERWAR own products are normally perceived by readers as the release of another play model with standard characteristics: weight, length, firing range. The final product has a finished look, is thought out and looks attractive. Frequently the impeccable look is the result of several years of painstaking work. Why is new weapon construction a difficult job? Is it sufficient to just choose a suitable real weapon model, duplicate it and bask in the sun? Actually, it is a lot more complicated.

Sniper

Sniper rifles for laser tag repeat in each detail real combat weapons. Realistic sniper rifles for individualists who love long ambushes. Laser tag rifles are equipped with optical tubes, which provide the longest range of fire - up to 300 meters.

SVD-S HUNTER STEEL SERIES

[Visit product page](#) 

The frame is almost entirely (except for the plastic forearm and grip) is made of gun steel. That's why it weighs more than the airsoft weapon (4.1 kg against 3.7 kg). The length is also different. In ORIGINAL sets we had to shorten the barrel. We did it not only to make the weapon look like the real combat one but because the standard foresight was made of aluminum alloy. The length is 136 cm. Use the safety lock to reload the weapon. The lithium accumulator (2.2 Ah) gives you up to 30 hours of great performance.

Prices

v.9 Smart RGB	\$1,026
v.10 X-GEN Wi-Fi	\$1,066

SVD HUNTER ORIGINAL SERIES

Visit product page [↗](#)

The weapon is a real replica of the famous SVD, manufactured by IZHMAH. The size of the parts is identical to those used in the original weapon. It would be hard for you to tell the difference between the guns. The lovers of sniper rifles will like the metal frame with high-impact ABS plastic inserts as well as the folding buttstock. Ergonomics and increased reliability - these are the distinctive features of this tagger. Remove the safety catch to turn on the weapon, use the bolt to reload the tagger. You can install sighting equipment on top of the receiver.

VSS VINTOREZ ALPHA STEEL SERIES

[Visit product page](#) 

The main innovation is the frame. Now it is made completely of steel. Even the suppressor with the optical system inside is made of steel as well as the receiver (the previous models couldn't afford that). As a result, the weight of the Vintorez ALPHA has become identical to the real figure - 2.6 kg. But its reliability has increased as well. Given the fact that this model is not a full-fledged copy of the real weapon, ALPHA looks remarkably good. As for the rest, the Vintorez differs from the previous versions in no way: use the anti-vandal lock to turn on the weapon, the bolt is responsible for reloading.

SVD TITAN

SVD TITAN STEEL SERIES

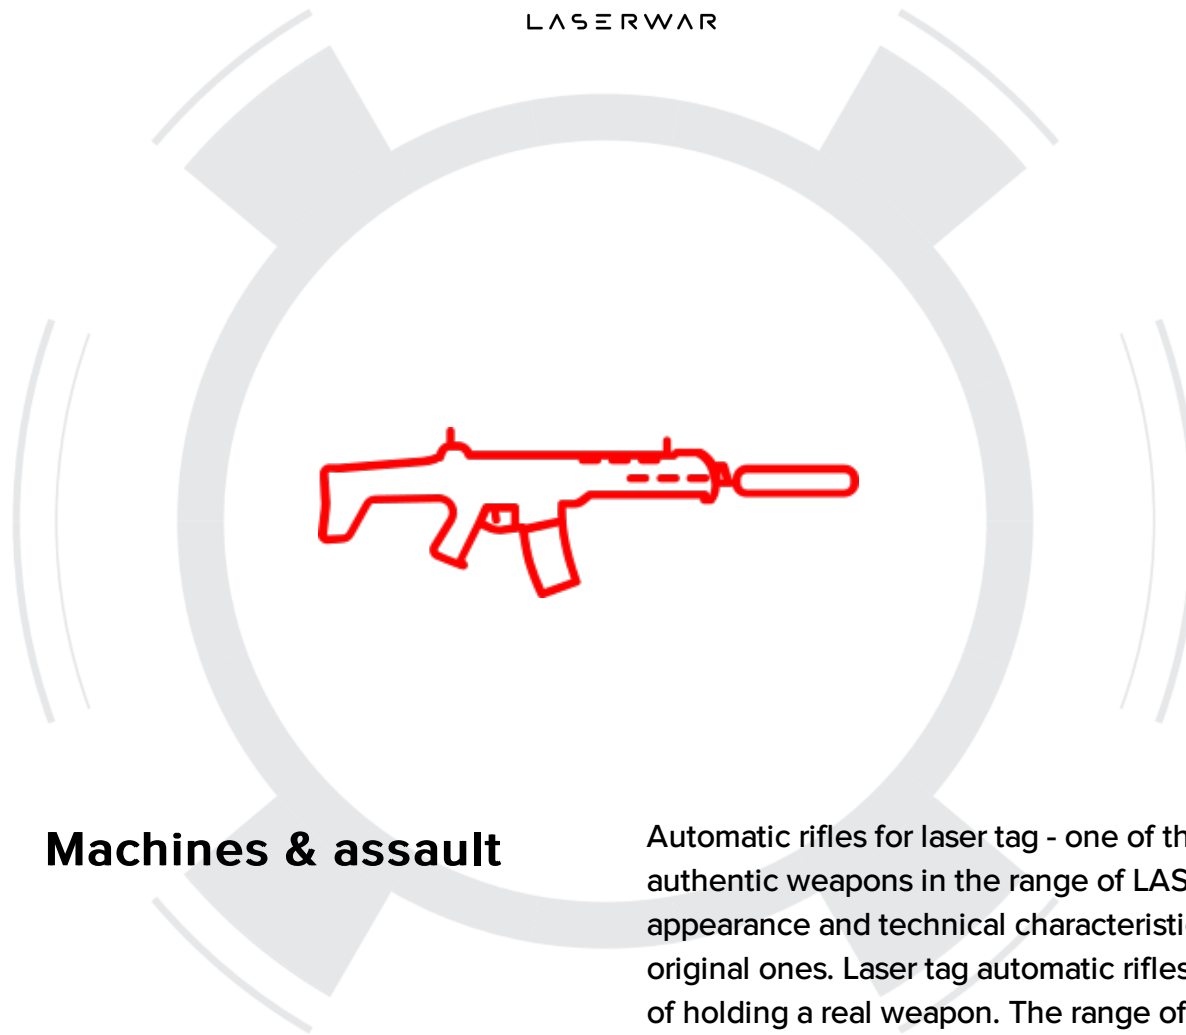

[Visit product page](#) 

The production of MMG SVD sets started at 2012. Trying to put we weapon in production we went to a certain risk - the weapon has one of the most expensive frames we have ever produced. However, the goal justified the money spent on the model: many people considered buying this realistic weapon. Turn on the weapon by switching the safety catch into the fire position. The integrated electronics makes the weapon look like a real prototype. The barrel is made completely of steel. The length has been increased from 124 to 136 cm. Use the bolt to reload the weapon. The set uses a lithium accumulator (3 Ah).

AK-12 IRBIS STEEL SERIES

[Visit product page](#) 

Connoisseurs of authentic models can replenish their arsenal by buying the AK-12 IRBIS laser tag submachine gun, which is based on the training Kalashnikov AK12 SU weapon from IZHMAH. Made of the components of decommissioned weapons, the weapon is as authentic as possible. And the relatively low prevalence of this model in the market will make you the center of attention during any game - very few have seen this weapon in reality. The weapon steel body makes the tagger virtually indestructible, even at the rental conditions, and the use of weapons-grade plastic for rails reduces the overall weight.

AKM PROROK

[Visit product page](#) 

Today we are presenting a new model for laser tag enthusiasts the PROROK AKM of the ORIGINAL edition with Magpul accessories. It is no secret that the old good AKM is well known and highly popular in the USA. Many small arms companies took up finishing off the assault rifle in the attempt to refine its austere and bold design in their American manner. The majority of them tried to achieve this by adding AR-15 accessories to it. Just a short time ago, the famous Magpul company blew away Kalashnikov fans by a customization equipment set with the inspiring name ZHUKOV.

AK-12 IRBIS-K STEEL SERIES

Visit product page [↗](#)

The shortened version of the 5.45 mm AK-12K assault rifle was presented by the Izhevsk Kalashnikov Concern at the Army-2017 military-technical forum. The full-size AK-12 IRBIS has long had a well-deserved place in our arsenal and is in high demand by players who value highly authentic weapons. And what could be more authentic than a model based on a real combat prototype? We have expanded our AK-12 range and today we are introducing a compact version of the AK-12 IRBIS. The barrel of the new model ends just behind the gas tube, thus reducing the overall length of the gun by 7 cm.

AKS-74U FALCON PRACTICAL SERIES

[Visit product page](#) 

CYMA airsoft gun is of the same good quality as the previous version. The cast metal frame, the magazine, the foldable frame stock, and the wooden handguard are same as those of the combat gun. The metal parts are properly made, you get a smooth trigger pull, there is no backlash in the stock. In spite of the good breechblock action, we decided to not take a risk. Therefore, the device is fitted with a reloading button. In order to switch the FALCON on, one needs to turn the key in the advanced security lock.

LASERWAR

Sub-machine guns

Submachine guns for laser tag are based on airsoft and combat models. This small weapon can be used by both: adults and kids. Realistic submachine guns hit sensors at a distance of up to 200 meters.

SPARK

ARP 9 SPARK ORIGINAL SERIES

[Visit product page](#) 

You need to purchase defeat sensors for this play set. A laser tag play set with a telescopic buttstock from sub-machine guns category. Authentic look and reloading mechanism. Its set up through the laser tag configurator program. This model will be the favorite of players who prefer close quarters battle (CQB). This is a compact laser tag sub-machine gun based on an airsoft ARP 9 model by G&G company. Taking AR-15 design and adding extended magazine for 9mm ammo, a short barrel with M-LOCK foregrip and extensible buttstock, our engineers created compact and convenient sub-machine gun perfect close combat weapon.

KRISS VECTOR

KRISS VECTOR ELITE SERIES

Visit product page [↗](#)

The weapon has a metal body with plastic elements made in Taiwan. All the electronics are inside the frame, and everything workspicture perfect. The device has a safety catch and a fire mode switch. The safety catch turns the weapon on/off. The weapon is relatively heavy (3. 55 kg), due to the body materials used (metal and special plastic). But despite that, it is comfortable to hold KRISS VECTOR as well as to shoot from it. The length of the device varies, thanks to the collapsiblebuttstock. 58 cm (folded position), 80 cm (unfolded position).

KAYMAN

P-90 KAYMAN ORIGINAL SERIES

[Visit product page](#) 

The game set is based on an airsoft weapon from Classic Army. The main advantages of this model are relatively small dimensions and weight. The length of the weapon is 69 cm, and the weight of P90 is 2.760 grams. The body is made of shock-resistant ABS plastic. Thanks to the bullpup system, our specialists managed to achieve a full integration of laser tag electronics. Under the trigger, you can find a fire mode switch (with A, 1, S modes). In the first two modes shooting is possible, and in S position the trigger mechanism is blocked (in the last versions of equipment the function of fire modes switching is removed).

SKS-45 SIMONOV STEEL SERIES

[Visit product page](#) 

Today we have a new weapon in our arsenal the legendary SKS-45. This is a semi-automatic carbine by Sergey Simonov. It was specially made in 1943 for an 7. 62x39 experimental cartridge. We associate SKS with the weapons of the Great Patriotic War though it wasn't often used by the forces. The first samples were presented for testing in 1944 and received the most positive marks. It took some time to create a cartridge. The weapon was finally adopted in 1949. Until the late 1980-s the SKS was used by some branches of the armed forces, and today, thanks to its aesthetics, it is used as a ceremonial weapon during parades.

Pistols

Players often use laser tag pistols as a second, additional weapon. The small size allows you to always carry the pistol with you and quickly use it in combat. The laser tag weapon with an external tube finds the target at a distance of 80 meters, without the tube - at a distance of 40 meters.

APB STECHKIN ELITE SERIES

[Visit product page](#) 

The Stechkin automatic pistol is undoubtedly one of the best examples of domestic production. Despite the fact that the weapon was taken out of production five years after the start of its serial production, SWAT units, special forces, riot police are still using it in combat missions. We, in turn, have breathed a new life into the legendary gun. We present you the APB Stechkin game set, ELITE series. Integrating laser tag electronics is a hard task. But what we have done with this model is hardly imaginable. The frame is made of metal alloy based on aluminum. It weighs just 950 grams.

Prices

GLOCK ORIGINAL SERIES

[Visit product page](#) 

The Glock pistols were made by Glock company for the Austrian army. They were the company's first weapons. The weapon was quite good and was later adopted by the Austrian army where it was known as P80. More weapons were created for the consumer market, but this one became an ideal option for law enforcement agencies. The Glock pistol was used by police officers all over the world. Later on, GLOCK became widely known for its combat characteristics. The structural features include a special airsoft frame and lack of the hammer. The frame is made of metal alloy with aluminum.

PM STEEL SERIES

[Visit product page](#) 

The Makarov pistol was created in 1948 for the needs of the Soviet Army and remained the main military weapon of self-defense until the beginning of 1990. It was also used by the police. The owners pointed out to its highest reliability and simplicity. As a result, it became popular even though there was a great variety on the market at that time. American and European weapons were no match to PM. In addition to the Soviet Army and law enforcement agencies, The Makarov pistol was manufactured for the German Democratic Republic, Bulgaria, China, and the Dominican Republic.

Prices

APS ELITE SERIES

[Visit product page](#)

The main feature of this tagger is lack of a traditional polyamide tube. The APS has an optical system specially designed for pistols. The maximum range is 50 meters. To reduce the killing zone there is a special plug looking like that in biathlon weapons. Due to the plug, the range becomes a bit smaller so does the killing zone. Shooting from the weapon puts the players skills on trial. The frame is made of metal alloy with aluminum. The weight is 885 grams. The lithium battery (800 mAh) gives you 10 hours of comfortable game. The length of the pistol is 22.5 centimeters - like in the original combat prototype.

Prices

v.9 Smart RGB

\$404

DESERT EAGLE ORIGINAL SERIES

[Visit product page](#) 

Desert Eagle - a hit weapon we have seen many times in our favorite movies, computer games, TV shows. This weapon was popular among the heroes of Snatch and Predator- two very famous movies. You can also see it in many movies starring Arnold Schwarzenegger. The real prototype is a weapon you should hold in two hands. However, given that the frame is made of metal alloy with aluminum, the weight is only 905 grams, the length - 270 mm. Due to this fact, the players will be able to use it holding in one hand thus making the weapon an ideal solution as an additional weapon for a sniper or a stormtrooper.

Prices

HITMAN PRACTICAL SERIES

[Visit product page](#) 

The frame is made from metal (breechblock) and impact resistant plastic. A 750 mAh lithium-ion accumulator provides up to 10 hours of continuous operation. During the development process, we managed to achieve full integration of the electronics into the frame in order to make the blaster authentic. We have made sure there is no backlash. There is just one distinction from the original Yarigin pistol. It is that there is a Picatinny rail at the bottom of the play guns barrel. It allows modernizing the weapons with a tactical torch or a laser aim finder. The switch button is hidden at the bottom of the magazine.

Prices

Grenade launcher & shotguns

Grenade launchers and shotguns for laser tag have a spectacular appearance and add drive to the game. The deadly combination of an extremely high rate of fire and damage leave no chance to the enemy players. Such a laser tag weapon can hit a tank, armored personnel carrier and a transporter.

M4 GASTAT ORIGINAL SERIES

Visit product page [↗](#)

Shotguns are not very popular in laser tag. To a certain extent, this is due to the fact that the assortment of shotguns is not as varied as it is of assault rifles and sniper rifles. When inside buildings, players prefer to use a second weapon, such as compact pistols and submachine guns. Yet a shotgun is the king of rooms it is frequently more efficient and will manage 3 to 4 rivals at a time. Two shots will be sufficient to force rivals to leave a convenient location and to make it available for team allies.

THUNDER

RPG-22L THUNDER EXTRA SERIES

Visit product page [↗](#)

The length of the RPG-22L is 75 cm, making it a little longer than the M-79 or the MLG-6. Yet the light weight of the blaster makes up for its length - it only weighs 1.5 kg. Our special imitation of delayed grenade explosion has been implemented in this play set. The infrared impulse is activated 1 second after the shot button has been pressed. The effective firing range is between 200 and 300 meters. This is a single-use weapon, which means that the grenade launcher will switch off after use and will need to be switched on again. The defeat sensors are integrated inside the blaster.
