# Getting started

## 1. Introduction

Congratulations on having purchased a laser tag knife, an additional device. Your time in laser tag is our TOP priority. We attempt to keep the game easy, fun, and modern.

The device is the pinnacle of additional LASERWAR devices. You can take the device out of the box and start working right away thanks to the user-friendly interface and control system.

If you are just getting to know equipment, the instructions will help you learn quickly and start the game. If you're a seasoned user, go through all of the information and make sure you didn't miss anything from the possibilities provided by the laser tag knife.

## 2. Description

On the playground, the device imitates a close combat. The principle is simple: the infrared diode is responsible for the hit. The diode is located in the handle at the base and directed in the opposite direction from the rubber blade. Press the button to virtually kill the enemy regardless of his hp level.

The impact range is within 0.5 m. The weapon is powered by a small CR2032 3v. battery

# Playing with a laser tag knife

## 3. Switching on/off

By default, the knife is in standby mode; however, pressing the button for a second causes it to activate for a second, make a shot, and then return to the standby mode.

## 4. Device settings

The device does not require any settings; it virtually kills players at the press of the button.

## 5. Operation

Point the knife sensor with the handle towards your opponent. Press the button, the device fires a "shot" that instantly kills the player.
